PROFESSIONAL SUMMARY

Lecturer in the Department of Software Engineering at Daffodil International University, and a Computer Science and Engineering graduate of BRAC University (CGPA 3.97/4.00), graduating among the top of the department, with four IEEE-published research papers in machine learning, computer vision, and explainable AI, and two further papers under review in 3D computer vision. Served as an Undergraduate Teaching Assistant for both Data Structures and Algorithms, mentoring 200+ students, and contributed to BRAC University-funded research under the Research Seed Grant Initiative (RSGI), including AI-based assistive technology for accessibility. Strong foundation in machine learning, NLP, computer vision, and full-stack development, with a keen interest in teaching, mentoring, and advancing applied AI research in a university setting.

RESEARCH INTERESTS

Machine Learning · Computer Vision · 3D Vision & SLAM · Explainable AI (XAI) · Trustworthy AI · Medical Imaging · Biomedical Signal Processing · Embedded / Edge AI · Assistive Technology

ACADEMIC APPOINTMENTS

Lecturer **Sep. 2026 – Present**

Department of Software Engineering, Daffodil International University — Dhaka, Bangladesh

- Teaching three undergraduate courses with their accompanying laboratory sections: Software Quality Assurance Testing (SE312), Data Structure (SE131), and Algorithm Analysis (SE214).
- Continuing research in machine learning, computer vision, and explainable AI alongside teaching.

EDUCATION

BRAC University **2022 – 2026**

B.Sc. in Computer Science and Engineering — Dhaka, Bangladesh

CGPA: 3.97 / 4.00 — graduated among the top of the department

PUBLICATIONS

JOURNAL ARTICLES

Joint Conf. on Computer Science and Software Engineering (JCSSE)*, Bangkok, Thailand, Jun. 2026, pp. 638–643, doi: 10.1109/JCSSE68839.2026.11596610.

ONGOING RESEARCH PROJECTS

UNDER REVIEW & PREPRINTS

CADENCE: Sensor-Grounded World-Consistent Gaussian SLAM for Collaborative Mobile Reconstruction **Under review**

3D Vision · Collaborative SLAM — under double-blind review; arXiv preprint forthcoming

Collaborative 3D Gaussian-splatting SLAM across smartphones in which only deterministic geometric and physical tests can accept a cross-device link and per-modality confidences gate what a peer may change, so a degraded device cannot corrupt the shared map; false links stay below 0.5% on eight held-out Matterport3D houses, and a native iPhone app maps 15 Hz LiDAR in real time (20.3 ms p95 pose time).

Less Than Meets the Eye: Action-Set Identifiability and Principled Abstention for 3D Physical Geometry — **Under review**

3D Vision · Identifiability — under double-blind review; arXiv preprint forthcoming

Intervene3D decides whether a bounded set of camera motions can tell a real scene apart from its mirror reflection or an on-screen image, abstaining when no motion separates the explanations; abstention lowers false physical certainty from 0.832 to 0.000 on a pixel-identical benchmark, and viewpoint selection lowers ambiguous-region error by 31.3% on real photographs.

MANUSCRIPTS READY FOR SUBMISSION

On-Device Sleep Staging from Wrist Actigraphy and Heart-Rate Variability: A CNN-SE-BiLSTM Sequence Modeling Approach — **Manuscript complete**

***Abrar Samin**, Himika Tasnim, and Aniqua Nusrat Zereen — preparing for journal submission*

Leakage-controlled, subject-independent four-stage sleep staging from a wrist wearable: 77.2% accuracy and Cohen's κ of 0.68 (+7.9 points over logistic regression), a 3.28× distilled model for on-device use, and total sleep time that agrees with polysomnography (r = 0.96).

Patient-Referenced Evaluation of Clinical Findings and Re-Identification in Report-Conditioned Synthetic Chest Radiographs — **Manuscript complete**

Medical Imaging · Generative AI — preparing for journal submission

A patient-referenced protocol for what diffusion-generated chest X-rays carry beyond their prompt: across three generators and three cohorts, renders show findings the prompt omits far less often than the patient's own radiograph, and re-identification against prompt-matched distractors falls close to chance.

IN PROGRESS

Hybrid Deep Learning and Signal–Spectrogram Fusion for EEG Classification — **In progress**

Biomedical Signals · EEG — code and experiments complete; manuscript in preparation

A CNN–BiLSTM–GRU hybrid benchmarked against a Random Forest baseline with a full architecture ablation, and a dual-branch network fusing the raw signal with its STFT spectrogram via cross-attention, with gradient-based saliency for interpretability.

RESEARCH EXPERIENCE

Undergraduate Researcher — **2024 – Present**

Research Seed Grant Initiative (RSGI), BRAC University — Dhaka, Bangladesh

- Contributed to a BRAC University-funded research project under the Research Seed Grant Initiative (RSGI) developing an AI-powered assistive navigation system to support safe, independent mobility for blind and low-vision users.
- Worked on computer vision and on-device (edge) AI components for a low-cost wearable platform, advancing the system from a validated proof-of-concept toward a deployable prototype intended for real-world, ethics-approved field trials with blind and low-vision users.

TEACHING EXPERIENCE

Undergraduate Teaching Assistant — **2024 – Feb. 2026**

Department of Computer Science and Engineering, BRAC University — Dhaka, Bangladesh

- Served as Teaching Assistant for both Data Structures and Algorithms, supporting lectures, lab sessions, and consultation hours — reaching 200+ students.
- Guided students through programming assignments and algorithmic problem-solving, strengthening their understanding of fundamental data structures and algorithm design.
- Graded assignments and exam scripts and gave constructive, individualized feedback to help students improve their performance.

SELECTED PROJECTS

WeHeal — Healthcare Innovation Platform — **weheal.live**

An AI-powered, all-in-one healthcare platform for patient care and medical diagnostics — online doctor consultations, appointments, prescriptions, and emergency support in one place. Built with a team and awarded 1st Runner-Up at BRAC University's System Analysis & Design Project Showcase (2025).

Autonomous ArUco-Marker Multi-Terrain Service Bot — **Video demo**

An autonomous service robot that navigates varied terrain using ArUco fiducial-marker detection for localization and task guidance, pairing computer vision with real-time control on a mobile robotic platform.

TECHNICAL SKILLS

Programming Languages: Python, Java, C++, JavaScript

Frameworks & Libraries: Node.js, Express.js, MediaPipe

Databases: MySQL, MongoDB

Tools & Technologies: Git, REST APIs, Machine Learning frameworks, Computer Vision libraries

HONORS & AWARDS

- Dean’s List — recognized for academic excellence, BRAC University.
- 2nd Place — BRAC University RoboSoccer Competition.
- 1st Runner-Up — System Analysis and Design Project Showcase, Summer 2025 (for WeHeal).

LANGUAGES
